Summary

Backend developer, enthusiastic about cybersecurity and machine learning. Having achieved success in various hackathons and competitions, I ranked 41st in Russia and 567th globally on [CTFtime](#) in 2023. Love hard challenges and fun projects

Skills

- **Languages:** Python, C, bash
- **AI Frameworks:** TensorFlow, Keras
- **Databases:** SQL, PostgreSQL
- **Tools:** Git, Docker, Linux

Explore my cybersecurity skills on the [roadmap](#).

Education

- **High School:** Chesterton Community College, Graduation Date: 2026
 - **Middle School:** Lyceum Innopolis, Graduation Date: 2023
-

Professional Experience

Startup Accelerator

Participated in the Innocamp hackathon, winning with an AR-based active lifestyle platform. Selected for the Russol Startup Accelerator ([russol.info](#)) in 2020. Developed an app prototype and secured investments.

Internships

1. YAI Digital (Apr 2024 - today)

- **Role:** Software Engineer Intern (Backend design, implementation, and testing)
 - **Responsibilities:**
 - Set up and maintained GitHub Actions for automated CI/CD workflows.

- Achieved 71% test coverage across backend services using automated unit and integration tests
- *Contact:* Yana Lapitskaya, [linkedin](#)
- [Website](#)

1. INVIAN (June 2021 - Aug 2021)

- *Role:* Software Engineer Intern (API design and implementation)
- Responsibilities:
 - Designed and implemented RESTful API using Python
 - Implemented an algorithm for generating fake weather on images to extend training dataset
 - Set up a staging environment on infrastructure
- *Contact:* Vladimir Semenov, vladimir@invian.ru
- [INVIAN LinkedIn](#)

2. Infomatica (Apr 2020)

- *Role:* Machine Learning Intern
 - Introduced to hardware design and development processes
- *Contact:* **Upon Request**
- [Infomatica website](#) Here is an updated version of your responsibilities with additional points:

Projects

AlvOS

A Christmas weekend project, that was inspired by retro games. I was curious about how operational system work and built my own that runs a playable Asteroids game. It was fun :)

Project can be found here: [GitHub](#)

Kandy kafka

CS A-levels coursework: [GitHub](#)

Kandy Kafka is a user-friendly terminal-based interface designed for efficient management of Kafka clusters. This project aims to simplify interactions with Kafka, providing a streamlined and intuitive way to handle Kafka operations directly from the command line.

First CTF Club

Established a CTF club at college, sharing knowledge and setting up challenges on the [CTFd platform](#) on AWS free tier.

- Source code for challenges: [GitHub](#)

Christmas Invasion (Game)

Developed a 2D platformer game for [GameJam](#) in 2021. [Game Link](#)

Innocamp Hackathon Projects

- CVAT (Security system based on face recognition)
 - CoffeeCoin (Russol Project) Unfortunately, at that time I did not know how to properly use Git and therefore the code was lost
-

Competitions

Innocamp

Attended Innocamp, an IT camp for kids, three times, securing first place at the hackathon on the final 2-days of camp twice. Worked on projects like CVAT, a facial recognition security system, and Coffee-Coin, an AR app for promoting an active lifestyle. Coffee-Coin reached the final round of a startup accelerator and received investments.

More details about the camp [here](#)

All-Russian Olympiad for Schoolchildren (VSOSH)

Secured second place in information security in 2022-2023, a prestigious national competition.

[Results](#)

CTFtime

Participated in several CTF competitions, achieving 41st place in Russia and 567th globally in 2023. Team details on [CTFtime](#)

Robotics Competitions

- [T2C](#)
- [WRO](#)
- [WorldSkills](#)

AI Competitions

- **InnoRoboHack**
 - 7th out of 15 teams
 - [Event Description](#)
 - **WorldSkills Russia**
 - 2nd and 1st places in the first stage. Didn't participate in the final due to overlapping events.
 - [Competition Tasks](#) (in Russian)
 - 2-Day Generative AI hackathon from ELASTACLOUD
 - [Website](#)
